

Welcome to SODSV!

This mod combines the **Seasonal Villager Outfits**, created by Tanpoponoko, ParadigmNomad and a large community of artists, with the ongoing **Diverse Stardew Valley** project, created by notsnuffie, and continued by a large community of artists of its own. The seasonal variant outfits, portraits and sprites for this content pack were created in large part by tenthousandcats, Airyn, leilacrystal, brontitall, and hugbeam; a full list of artist credits is included in the download. The Content Patcher coding and Github hosting has been done by minervamaga and cel10e.

In this content pack, both vanilla and modded versions of nearly every character are included — only Clint, Linus, Pam, and the Wizard currently have just vanilla versions. The mod is **configurable** to toggle each character between complete sets of vanilla and modded variants, each with seasonal outfits; some characters even have multiple modded versions! This toggle functionality is provided by the **config.json** file, which is included with the download with sample options set.

Installation and Dependencies

This mod requires the SMAPI modding framework; if you have not installed SMAPI before, see https://stardewvalleywiki.com/Modding:Player_Guide/Getting_Started for instructions.

This mod also requires Content Patcher, a mod framework that allows sprites and portraits to be changed in-game without actually replacing game files; be sure to download and install [Content Patcher from Nexus](#) before using this mod.

Once those two dependency mods are installed, then download the file for this mod, extract it, and move it to the /Mods folder in your game files to install it. A sample config is included with this mod to provide guidelines for the settings.

To uninstall the mod, simply move it out of the /Mods folder in your game files.

Configuring the Mod

To configure the options included in this mod, open the **config.json** file from the mod folder with a text editor on your computer (TextEdit on Mac, Notepad/Notepad++ on Windows, or any code-editing application will work). You will see a long list of options formatted like:

```
"AbigailVariant": "vanilla",
```

The text in the first set of quotes (e.g. "AbigailVariant") is the name of the option, which is used in the code of the mod: **do not change** this text, or the option won't work properly!

The text in the second set of quotes (e.g. "vanilla") is the option that is currently chosen; this is what you will change to whichever option you prefer for that character. A full list of each option and its possible choices is provided below.

Some options in the **config.json** only apply to certain variants of characters or depend on the values of other options. Do not delete options from the config file even if they seem irrelevant to your game!

If for some reason you delete, rename or corrupt the **config.json** file, it will be recreated automatically the next time the game launches, with default options selected.

Options FAQ

How to use the toggle options

- Almost all of the toggle options ("[NPC]Variant", etc) have three options: vanilla, modded, and disable. (**Alex, Evelyn** and **George** have vanilla, hispanic, samoan, and disable; **Leah** has vanilla, native, butch, and disable.)
 - Choosing "vanilla" will show the vanilla version of the NPC with different outfits for each season. This is equivalent to using the **Seasonal Villager Outfits** mod.
 - Choosing "modded" will show the **Diverse Stardew Valley** version of the NPC, with different outfits for each season. Many Diverse Stardew Valley NPCs have further options such as art style or cosmetic variants that can be found in their [individual options](#).
 - Choosing "disable" will turn off this mod's function entirely for the NPC. They will show their vanilla style and default outfit all year-round. This option allows you to use other NPC mods (for example, if you prefer another mod for one character) without conflicts.

NPC-specific options

- All NPC-specific options will start with a default value selected in the **config.json**. For example, when there is a choice between two different-colored outfits, one color (usually the first alphabetically) will be the starting default. All of these options work fine without review, if you prefer to just load the mod without spending much time setting options.

List of Options

This page contains the full list of options provided in the config.json of this mod. To navigate, use the table of contents below.

The **Individual toggle options** section lets you choose between the vanilla or Diverse Stardew Valley variants of each character, or `disable` this mod for a character entirely (i.e., to use a separate mod instead of this one).

The **Character-specific options** section contains detailed explanations of the options this mod includes for each character.

Individual toggle options

NOTE: The images given here are meant to broadly represent each choice, and many characters' appearances can be further tweaked by choosing art styles, outfits, and more in the **Character-specific options** section below. Additionally, every variant (except for characters you choose to disable) has a full set of seasonal outfits.

- For all characters except **Alex, Evelyn, George**, and **Leah**, the toggle options are vanilla, modded, or disable to switch between the vanilla seasonal outfits, Diverse Stardew Valley seasonal outfits, or to disable the mod for that character.
 - For **Alex, Evelyn, and George**, the toggle options are vanilla, hispanic, samoan, or disable.
 - For **Leah**, the toggle options are vanilla, native, butch, or disable.
